ReadMe - TireMaster 9.1.2

TireMaster 9.1.2 is a service update; it resolves an issue that prevents workstations from being updated to TireMaster 9.2.0 (the next major release) via the auto-deployment process. Without this service update, you'll only be able to update your workstations to version 9.2.0 manually.

The 9.1.2 service update will be automatically deployed and installed on your TireMaster server during a process that runs overnight. If you have questions about this release, log a support call in Service Cloud at https://asatire.force.com or call TireMaster Support at **800-891-7437**.
